COTTON AND FIBER BRANCH MEMORANDUM NO. C-5 (REVISED)

Crop Quality Data for United States Reports

Strike paragraph 1 in Cotton and Fiber Branch Memorandum No. C-5 (Revised) issued May 7, 1945 and substitute the following:

1. Each Area Office will submit to the Statistical and Quality Improvement Division of the Branch the following data:
  - (a) The number of statistical samples (1) of each grade and staple length; (2) untenderable; and (3) reduced in grade on account of preparation. These data will be reported by States, but the first report should not be submitted until requested by the Statistical and Quality Improvement Division. The data will be submitted by telegram on the day preceding the release of figures on ginnings by the Bureau of the Census (see dates in Branch Memorandum C-10). The Southeastern, South Central, and Southwestern Areas will submit data for statistical samples from bales ginned during the last complete ginning period. Late samples will not be included. The Western Area will submit data for all samples classed during such ginning period for both upland and American-Egyptian.
  - (b) The adjusted number of statistical samples of (1) each grade and staple length; (2) untenderable; and (3) reduced on account of preparation. Adjustments will be made on the basis of county ginning figures so as to raise or lower the number of samples used for each district to 10 percent of the total ginnings. Late samples will be included before adjustments are made. These non-cumulative data by States will be submitted by mail in the same detail as the data sent by wire for each ginning period as soon as adjustments can be made. Since these data will be used in the published cumulative figures with a lag of one ginning period, they must reach Washington before the quality report is released for the next ginning period. The Western Area will not submit these adjusted data.
